

# Managing the Wormery

Keep the bedding  
**MOIST AT ALL TIMES**

Chop up veg food waste  
into **SMALL PIECES**

**BURY FOOD WASTE** in  
pockets within the bedding

## How to add food waste to the wormery...

When bedding and food waste have been composted, move compost and worms to one side of wormery.

Fill empty side with fresh moist bedding (straw, sawdust, shredded paper, torn up cardboard, autumn leaves – all mixed and soaked thoroughly).

Bury food waste into fresh side to encourage worms to migrate across. Ensure the waste is small enough to bury and avoid rodents.

After a few weeks, harvest the compost and fill up again with more bedding.
